

Extraction and Purification

We use the Complete Plant Profile. Our Extraction & Purification Process takes place at our 50,000 st. ft. state of the art extraction facility in Colorado Springs, CO. Our proprietary extraction technology allows for high levels of phytocannabinoids while eliminating unwanted amounts of THC and chlorophyll. To achieve this, we utilize a chromatography technique which allows for the identification and complete removal of the naturally occurring trace amounts of THC from the oil, while leaving intact the full spectrum profile of non-psychoactive phytocannabinoids and synergistic compounds such as cannabigerol (CBG), cannabinol (CBN), canna- bichromene (CBC), and over 40 naturally preserved terpenes.

We utilize a rigorous testing system. On site chromatography testing and 3rd party batch testing ensures accurate levels of phytocannabinoids and confirms the absence of THC through our proprietary processes. The end result is the highest quality full spectrum hemp derived phyto- cannabinoid rich oil that contains no solvents, no heavy metals, and no pesticides.

THC Levels

Our Zero-THC Phytocannabinoid Hemp Oil has absolutely no detectable levels of THC. This unique product is one of a kind and allows for the global distribution of our hemp oil into markets that have a zero tolerance for any levels of THC. Our extraction and purification process produces a full-spectrum oil, containing all cannabinoids and terpenes naturally found in hemp, but without the THC.

Chromatography and 3rd party testing ensures accurate measurements of phytocannabinoids and confirms the absence of THC through our proprietary processes.
